Summer Veggies... *EARLY!*

Did you know that veggies like cucumbers and tomatoes only grow when it's really HOT? So how do we have them so early in May and June? Some of our farmers grow vegetables

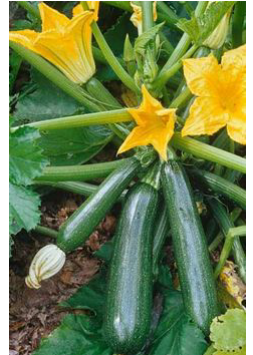

in **HIGH TUNNELS**: the sun shines through the clear plastic and heats up the ground inside, so the tomatoes can grow and ripen!

It's like how your car gets too hot when the sun shines on it. But veggies like tomatoes and cucumbers LOVE hot weather!

Vegetable of the Month:

ZUCCHINI!

Zucchini is a great summer vegetable that is fun to grow in a garden. But watch out-- they grow REALLY FAST and like to hide under the big leaves of the plant! Sometimes you'll go out to pick zucchini and find one that is bigger than your head!

really big
zucchini! ↑

When this happens, there's only one thing to do... Make zucchini bread, or muffins!

(A great way to eat your veggies. In your dessert!)

Where
am I?

What can you find
all around the store?

- ★ Corn
- ★ Watermelon
- ★ Strawberries
- ★ Garden tools for Kids
- ★ Very tiny white flowers
- ★ Very BIG pink flowers
