Be a tomato expert!

Is your family planting tomatoes this month? You can help them out with some expert advice!

1) Have everyone in your house save egg shells for a few weeks.

When you are ready to plant tomatoes, crush the eggshells into a powder, and sprinkle the powder into the planting hole before you put the tomato in. This provides calcium!

2) You can plant tomatoes REALLY deep! Carefully trim the bottom leaves so they don't get buried. All the tiny hairs along the stem will grow into roots underground, making the plant really strong and sturdy!

Vegetable of the Month:

LETTUCE!

May is a GREAT month for lettuce in our area. It loves to grow in the spring when the weather is warm but not hot.

Weird but yummy: Try this!

Here is a cool way to try lettuce if you are not crazy about salads. Take one leaf of lettuce. Sprinkle it with a little vinegar. Sprinkle it with a little sugar. Roll it up into a tube and... CRUNCH! Not bad, right?

Can you find me?

Look for these things around the store!

Pies **Lemons**
Seeds **Bacon**
Celery **Crackers**
Soaps

Solve this tricky riddle to find one more:

If you're feeling brave, give me a shot... you can pour me on your food, but watch out:
I'm **HOT!** **What am I?**

Color Me!
